WORK EXPERIENCE

Teaching Assistant (COMS4995 ML/AI Security) | Columbia University, NY | Link — Jan. '26 – May '26

- Partnered with Dr. Suman Jana to launch a new graduate research course on ML/AI security threats, including prompt injection, data poisoning, agent vulnerabilities, and the defenses against them across data, application and system layers.
- Guided 18 selected graduate students through 8 original ML-security research projects to develop novel papers with high standards by mentoring and grading on novelty, execution and accuracy.

Forward Deployed Engineer | Rhino Federated Computing (HealthCare Series A) | Link — Dec. '24 – Sep. '25

- **Federated ML & Solution Design:** Took healthcare organizations from requirements to production federated-ML workflows over PHI (tabular and imaging data) under HIPAA compliance, by translating client needs with customer success and engineering teams to containerized NVFlare deployments with AWS and Azure that connected to Rhino's platform. Link.
- **Onboarding Documentation:** Authored the flagship onboarding docs (GUI first steps, SDK and encryption workflows) for the first clients onboarded onto Eli Lilly's TuneLab, which became Rhino's primary onboarding resource. Link, Link.
- **Critical Support:** Ensured seamless onboarding for TuneLab's critical clients by prioritizing and resolving Zendesk tickets.
- **ML Workflow End-to-End:** Demonstrated collaborative model training without data sharing by building standardized federated PyTorch workflows (e.g., phenomena detection) onto NVFlare to integrate with each client's storage and compute.

Strategic Security Specialist | Ministry of Foreign Affairs of Israel (Washington D.C.) — May '21 – Aug. '22

- Acted as diplomatic security officer for the Israeli ambassador with extreme ownership and strict confidentiality.

Combat Soldier Special Forces (Maglan) - Technologies & Tactical Systems | IDF — Nov. '17 – Nov. '20

- Operational and command experience. Teamwork, creativity and mission-oriented execution under pressure in elite unit.

EDUCATION

Columbia University - BA - Computer Science — Sep. '22 – May '26

- ML/AI and Entrepreneurship - Dean's List, "Renaissance" Honors Scholarship, PTK Honor Society, Teaching Assistant.
- **Notable Classes:** Applied ML, ML/AI Security, Neural Networks & DL, MIT 6.S191 Intro to DL.

TECHNICAL SKILLS

- **AI Agentic & RAG Engineering:** Strong proficiency in OpenAI Agents SDK, Claude API, LangChain, Hugging Face models, multi-agent systems, RAG, and tool-using LLM applications. Link
- **Full-Stack & Rapid Prototyping:** Building and deploying end-to-end AI apps and API integrations using React, Node.js, JavaScript and TypeScript. Rapid prototyping with Streamlit and Gradio, deploying web services via Vercel and Supabase.
- **Cloud & Infrastructure:** Extensive professional experience with Docker and CI/CD while deploying federated workloads across AWS (EC2, S3), Azure (Blob), Kubernetes for orchestrating, and Grafana for real-time system monitoring.
- **Databases & Data Engineering:** Proficient in SQL scripting and querying for production pipelines, with experience in Supabase and NoSQL systems including MongoDB and Neo4j. Exposure to healthcare interoperability standards – FHIR.
- **Machine Learning:** Core expertise in building different use cases for training models using PyTorch and Scikit-Learn. Link
- **Programming:** Strong professional experience with Python. Additional proficiency in Rust, C, C++, Java, and Assembly.

SELECTED PROJECTS

Personal Alter-Ego – Professional-AI-Representative Link
Built and deployed an AI-powered professional representative using RAG over my personal context and the OpenAI APIs, integrating Twilio and Tavily. Built the full-stack app end-to-end, automating lead capture and escalation of unknown inquiries.

Clawdstrike (Backbay Industries) – Open-Source AI Agent Security Gateway Link
Built an AI agent security gateway with proactive, fail-closed enforcement across agent tool calls and OS-level events, signed cryptographic attestations, and hash-chained audit trails for verifiable agent actions and security decisions. 300+ GitHub stars and industry interest.

Rhino Federated Computing – Advanced Tutorial for Secure Model & Code Encryption During Runtime Link.
Implemented secure runtime secret release using AWS Secrets Manager to address client security requirements.

Personal Interests: Long-Running and Endurance Sports, Architecture, Skiing, Climbing, Basketball.
