

Daniel David

ML/AI Engineer | HealthCare | Problem Solver | Columbia University

New York, NY 10025 | (202) 594 4804 | daniel.david@columbia.edu | [linkedin/in/ddavid37](https://www.linkedin.com/in/ddavid37) | github.com/ddavid37

EDUCATION

Columbia University - Bachelor of Arts - Computer Science

Sep. '22 – May '26

ML/AI track, Recipient of the "Renaissance" Honors Scholarship, Dean's List, PTK Honor Society.

WORK EXPERIENCE

ML/AI FDE Intern | Rhino Federated Computing (HealthCare Series A) | [Link](#)

Dec. '24 – Jan. '26

- **Customer Onboarding:** Partnered with customer-facing and engineering teams to onboard healthcare organizations onto Rhino's platform, gathering stakeholder requirements and translating business and technical needs into production-ready distributed ML workflows involving PHI while maintaining HIPAA compliance. [Link](#).
- **Encryption & Data Integrity Mechanisms:** Co-architected an advanced secure model transmission protocol leveraging AWS Secrets Manager to enforce cryptographic data integrity and framework security, aligning with current research. [Link](#).
- **System Reliability & Monitoring:** Implemented expanded network topology support and real-time system monitoring using Grafana, allowing for the diagnosis of latency bottlenecks in distributed learning sessions for critical customer support.
- **Customer Support Platforms:** Used Jira and Zendesk to collaborate and prioritize tickets for tasks and customer support.
- **Documentation:** Authored the flagship technical documentation regarding GUI and SDK usage as the primary onboarding document, along with additional technical guidance and customer support resources. [Link](#), [Link](#).
- **Data Analytics & Infrastructure:** Coordinated with engineering teams to develop and deploy standardized data pipelines, REST APIs, SDK environments, and customer integrations that streamlined healthcare data exchange and report delivery for partner organizations, including data harmonization efforts aligned with FHIR standards.

Course Assistant (COMS4995 ML/AI Security) | Columbia University, NY | [Link](#)

Jan. '26 – May '26

- Partnered with Dr. Suman Jana to launch a new graduate course analyzing multi-agent orchestration vulnerabilities, framework guardrails, and LLM adversarial exploitation vectors across data, application, and system layers.
- Mentored 25 graduate students through novel research projects while proactively managing student support, course logistics, and evaluations within a newly launched curriculum.

Security Officer - Ministry of Foreign Affairs of Israel (Israeli Embassy in Washington D.C.) May '21 – Aug. '22

- Acted as diplomatic security officer for the Israeli ambassador with extreme ownership and strict confidentiality.

Combat Soldier - IDF

Nov. '17 – Nov. '20

- Full combat service in special commando unit included intense training, operational, and commanding experience. Developed critical traits including adaptability, mission-oriented execution, teamwork, and creative problem-solving under pressure.

TECHNICAL SKILLS

- **Machine Learning:** Core expertise in building different use cases for training models using PyTorch and scikit-learn. [Link](#)
- **Cloud & Infrastructure:** Extensive professional experience with Docker and CI/CD while deploying federated workloads across AWS (EC2, S3), Azure (Blob Storage) and utilized Grafana for real-time system monitoring.
- **Full-Stack & Rapid Prototyping:** Building and deploying end-to-end AI applications using React, Node.js, and JavaScript. Experienced in rapid prototyping with Streamlit and Gradio and deploying scalable web services via Vercel and Supabase.
- **AI Agentic & RAG Engineering:** Designing multi-agent workflows and autonomous loops using OpenAI Agents SDK and LangChain. Focused on integrating LLMs with structured databases to build reliable, tool-using agents. [Link](#)
- **Databases & Data Engineering:** Proficient in SQL for production pipelines, with experience in Supabase and NoSQL systems including MongoDB and Neo4j. Exposure to healthcare interoperability standards, including FHIR.
- **Programming:** Strong professional experience with Python. Additional proficiency in Rust, C, C++, Java, and Assembly.

SELECTED PROJECTS

Tutorial #1 & #2 - Basic Usage of Rhino FCP and Rhino's SDK for Federated Learning workflows [Link](#), [Link](#).

Created the flagship tutorial for the Rhino FCP to guide users through core fundamental steps of the platform's GUI.

Model & Code Encryption for Secure Federated Computing Workflows [Link](#)

Developed a workflow to encrypt ML models and training logic in Rhino's Federated Computing Platform, with secure key handling via AWS Secrets Manager or JSON keyfiles, along with an article that serves as an advanced reference guide.

Clawdstrike (Backbay Industries) [Link](#)

Collaborated on an open-source project with over 270 stars; a novel security gateway for the new era of agent swarms. Designed to increase trustworthiness by implementing preventative guardrails with a cryptographic attestation audit trail for approvals and denials. Focused on business development through meaningful connections with the community, industry leaders, and potential investors.

Personal Interests: Geography, Innovation, Long-Running and Endurance Sports, Skiing, Climbing, Basketball.
